Observations

- High neutral-expression period detected (10s of 10s).
- Expression variability: LOW — stable expression.
- Average prediction confidence: 80.5% (reasonable reliability).
- Disclaimer: Facial expressions alone cannot establish attention or comprehension. These are estimated engagement indicators, not facts about the student's internal state.

Disclaimer: These are estimates derived from observable facial-expression patterns. Facial expressions alone cannot establish attention, comprehension, or internal emotional state. This report is intended as an additional feedback channel, not as a definitive assessment of any student.
